DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, 9-20, 32-45, and 58, drawn to power supply for DSL devices, classified in class 379, subclass 413.
 - II. Claims 28-31, drawn to telephone interface, classified in class 379, subclass 399.01.
 - III. Claims 46-53, and 59, drawn to gateway module, classified in class 379, subclass 90.01.
 - IV. Claims 54-57, drawn to the method for installation telecommunication equipment, classified in class 379, subclass 413.02.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I-IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention of group I is concerned with power supply that supply power to subscriber line. The subcombination has separate utility such as the invention of group II is concerned the telephone interface between central

office and customer side, the invention of group III is concerned the gateway module for DSL system, and the invention of group IV is concerned the method how to install the telecommunication equipment.

3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II-IV, restriction for examination purposes as indicated is proper.
